

Waste Diversion Done Right!

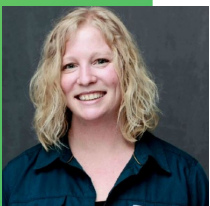

Sustainable Materials Management | Waste Diversion | Resource Recovery

VERT Sites provides General Contractors with practical and cost-effective solutions for handling jobsite waste and material streams.

Like waste, your jobsite is local and requires local solutions for managing materials.

We help you accomplish waste diversion, resource recovery, and sustainable branding by:

- Waste plan management design or assistance
- Retrieving municipal disposal deposits
- Jobsite resource recovery project management
- Waste diversion trainings
- Site signage
- Material stream audits
- Material disposal estimating
- Hauler negotiations/collaborations (while VERT Sites is not a waste hauling broker, we can research and provide you with the best hauler option for your jobsite's materials and material streams)
- Waste generation mapping
- Developing custom marketing and branding content that showcases your site's waste diversion efforts and accomplishments
